**Response to Comment(s)
On Rule in Development**

Rule number: 10 CSR 10-6.260

Rule Title: Restriction of Emission of Sulfur Compounds

Type of rulemaking: Amendment

Response to Comment from Kansas City Power & Light Company

Comment: In order to clarify the requirements of the Hawthorn SO₂ limit, we would suggest that the footnote to Table 1 read, "The SO₂ emission rate comes from the PSD permit for Unit 5A and is implemented in accordance with the terms of the permit."

This proposed language has been reviewed by MDNR and EPA Region VII and has been found acceptable to all concerned.

Response: The Missouri Department of Natural Resources' Air Pollution Control Program has discussed this footnote change with Kansas City Power & Light Company and with EPA Region VII and all parties concur to change the footnote associated with the Hawthorn Plant in Table 1. The revised footnote will clarify the requirements for the sulfur dioxide limit. The acronym PSD or Prevention of Significant Deterioration will be spelled out in the footnote since it is the first occurrence of the acronym in the rule.
